Portfolio Composition

Performance Since Inception

- The price per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. To ensure fair treatment to all unit holders, transaction costs of acquiring and disposing of assets of the Fund are recouped by making a dilution or transaction cost adjustment to the NAV per unit of the Fund. Allianz Life Insurance Malaysia Berhad retains the right to suspend issuance or redemption of units of the Fund under exceptional circumstances, e.g. temporary closure of any stock exchange, as disclosed in the fund brochure.
- Expenses directly related to and necessary in operating the Fund.

Allianz Life Oriental Income Fund

Manager's Comment (For Allianz Oriental Income- USD)

Market Commentary

- The Fund outperformed the benchmark during the month. From a country perspective, stock selection in Korea and Taiwan contributed. From a sector perspective, the overweight exposure to Information Technology, as well as stock selection in the sector accounted for the outperformance.
- On a single stock basis, our positions in two semiconductor equipment suppliers, Lasertec (Japan) and Koh Young Technology (Korea), as well as an Australian pharmaceutical name, helped most. Conversely, our overweight positions in two China biotech stocks and ASMedia Technology (a Taiwanese semiconductor company), weighed on the overall returns.

Market Outlook and Strategy

- During the month, we exited our holdings in a Thai energy company, a Chinese internet service provider, and a Singaporean aerospace and defense company. We added a Japanese health care products supplier and an Australian diversified chemicals company to the portfolio.
- At the end of the month, the top holdings were Lasertec, Mainfreight (a New Zealand based logistics company) and Alchip (a Taiwanese semiconductor company).
- From a geography perspective, the Fund has an overweight exposure to Taiwan and New Zealand, whereas Japan, China and India are underweight. At a sector level, the portfolio has overweight positions in Information Technology and Health Care, whilst only holding selective positions in the Financials, Communication Services and Consumer Discretionary sectors.

Investment Strategy & Approach

Investors should realize that there are risks of investing in the Funds as listed below:-

- **Market Risk** – The value of the Fund’s investment assets may be affected by changes in economic fundamentals, interest rate movement, regulatory policy, political and industrial developments. These market factors may result in fluctuations in the value of the Fund’s investment assets. This risk may be mitigated by ensuring regular and rigorous reviews of macroeconomic factors and asset allocation strategy.
- **Interest Rate Risk** – Interest rate risk arises when the value of the debt instrument fluctuates due to interest rate movements. When interest rate rises, the debt instrument prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rate falls. Debt instruments with longer maturities and lower coupon rates are more sensitive to interest rate changes. This risk may be mitigated by regular and rigorous reviews of asset allocation and duration strategy.
- **Country/Foreign Investment Risk** – This risk refers to the risks of investing in foreign markets. The value of the foreign investment assets directly or indirectly held by the Fund may be affected by country-specific factors, such as the country’s economic fundamentals, social and political stability and regulatory policy. This risk may be mitigated by ensuring regular and rigorous reviews of macroeconomic, socio – politic and regulatory factors as well as adopting an appropriate asset allocation strategy.
- **Currency Risk** – For foreign investments, fluctuations in currency exchange rates may have an impact on the value of the Fund’s investment assets. This risk may be managed by engaging in foreign currency hedging.
- **Sector Risk** – The value of the Fund’s investment assets may be adversely affected by the changes in sector-specific factors, such as the business condition, industry outlook and demand/supply dynamic of the industry. This risk may be managed through portfolio diversification and control on sector concentration risk.
- **Company Specific Risk** – The asset values of securities may be affected by company-specific factors, some of which include volatile business situations, adverse financial conditions and poor corporate governance. This risk may be contained through appropriate portfolio diversification, prudent investment selection and better control on investment concentration risks.
- **Credit and Default Risk** – This relates to the creditworthiness of the issuers of the debt and money market instruments as well as their abilities to make timely payments of interest and principal. Any adverse situations faced by the issuer may impact the value of the fund as well as the liquidity of the debt instrument or money market instrument. This risk is managed through appropriate portfolio diversification, stringent credit selection and control on sector as well as credit concentration risks.
- **Liquidity Risk** – If an asset has insufficient liquidity, there is the risk that the asset cannot be sold or can only be sold at a significant discount to the purchase price. Appropriate portfolio diversification, control on investment concentration limits taking into account liquidity constraints and regular monitoring could help mitigate the said risk.
- **Target Fund Risk** – As the Fund is a feeder fund, it will invest into a Target Fund which is being managed by a Target Fund Manager. While we would make every effort to ensure that the objectives of the Target Fund are appropriately aligned with those of ours, we do not have control over the Target Fund Manager’s investment in terms of its approach, intelligence, operations and management. In the unlikely event of any mishandling of the Target Fund, the NAV of our Fund, which is investing predominantly into the Target Fund, could be similarly adversely affected. This risk may be mitigated by our constant monitoring of the Target Fund, which is requisite to ensuring that the Target Fund’s objective, risk profile and characteristics are in line with ours. Please also refer to the Target Fund’s prospectus for more detailed and comprehensive information on Target Fund specific risks.

Overall, on top of regulatory limits imposed by Bank Negara Malaysia, we have put in place tight internal investment limits for all asset class with oversight by risk officer to ensure that the Fund does not take on excessive risk, albeit we cannot guarantee the total elimination of risks associated with investing in the Fund.
