Performance Since Inception

- The price per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. To ensure fair treatment to all unit holders, transaction costs of acquiring and disposing of assets of the Fund are recouped by making a dilution or transaction cost adjustment to the NAV per unit of the Fund. Allianz Life Insurance Malaysia Berhad retains the right to suspend issuance or redemption of units of the Fund under exceptional circumstances, e.g. temporary closure of any stock exchange, as disclosed in the fund brochure.
- Expenses directly related to and necessary in operating the Fund.

Allianz Life Oriental Income Fund

Manager's Comment (For Allianz Oriental Income Fund- USD)

Market Commentary

- Stock selection in China and Australia impacted fund performance negatively. From a sector perspective, the overweight exposure to Health Care and Information Technology weighed on returns.
- On a single stock basis, our overweight positions in three Taiwanese semiconductor-related names, including Alchip and Aspeed, helped most. Conversely, our overweight positions in a Chinese pharmaceutical name and Banpu, a Thai energy company, detracted.

Market Outlook and Strategy

- During the month, we exited our holdings in a Japanese steel maker and a Taiwanese electronic components supplier. We added two Hong Kong companies operating in the shipping sector, as well as a Taiwanese electronic components supplier.
- At the end of the month, the top holdings were Lasertec, a Japanese corporation supplying semiconductor equipment supplier, Mainfreight, the New Zealand based logistics company, and Alchip.
- From a regional perspective, the Fund has an overweight exposure to Taiwan and New Zealand, whereas Japan, China and India are underweight. At a sector level, the portfolio has overweight positions in Information Technology and Health Care, whilst only holding selective positions in the Financials, Communication Services and Consumer Discretionary sectors.

Investment Strategy & Approach

Investors should realize that there are risks of investing in the Funds as listed below:-

- **Market Risk** – The value of the Fund's investment assets may be affected by changes in economic fundamentals, interest rate movement, regulatory policy, political and industrial developments. These market factors may result in fluctuations in the value of the Fund's investment assets. This risk may be mitigated by ensuring a rigorous review of macroeconomic factors and asset allocation strategy.
- **Currency Risk** – For foreign investment, fluctuations in currency exchange rates may have an impact on the value of the Fund's investment assets. This risk may be minimized by engaging in foreign currency hedging.
- **Country/Foreign Investment Risk** – This risk refers to the risks of investing in foreign markets. The value of the foreign investment assets directly or indirectly held by the Fund may be affected by country-specific factors, such as the country's economic fundamentals, social and political stability and regulatory policy. This risk may be mitigated by ensuring a rigorous review of macroeconomic factors and asset allocation strategy.
- **Specific Security Risk** – The value of the assets in particular securities and money market instruments may be affected by company-specific factors, such as business situation, financial condition and corporate governance of the company. This risk may be minimized through diversification of investments in a wide scope of companies belonging to a multitude of sectors.
- **Sector Risk** – The value of the Fund's investment assets may be adversely affected by the changes in sector-specific factors, such as the business condition, industry outlook and demand/supply dynamic of the industry. This risk may be minimized through portfolio diversification and control on sector concentration risk.
- **Liquidity Risk** – If an asset has insufficient liquidity, there is the risk that the asset cannot be sold or can only be sold at a significant discount to the purchase price. The lack of liquidity of an asset may cause its purchase price to increase significantly. The risk is managed by including liquidity factor into security selection and further mitigated by diversification.
- **Target Fund Risk** – As the Fund is a feeder fund, it will invest into a Target Fund which is being managed by a Target Fund Manager. While we would make every effort to ensure that the objectives of the Target Fund are appropriately aligned with those of ours, we do not have control over the Target Fund Manager's investment in terms of its approach, intelligence, operations and management. In the unlikely event of any mishandling of the Target Fund, the NAV of our Fund, which is investing predominantly into the Target Fund, could be similarly adversely affected. This risk may be mitigated by our constant monitoring of the Target Fund, which is requisite to ensuring that the Target Fund's objective, risk profile and characteristics are in line with ours.

Overall, on top of regulatory limits imposed by Bank Negara Malaysia, we have put in place tight internal investment limits for all asset class with oversight by risk officer to ensure that the Fund does not take on excessive risk, albeit we cannot guarantee the total elimination of risks associated with investing in the Fund.
